

# CHILDREN BREATHING TURN YOUR ENGINE OFF!

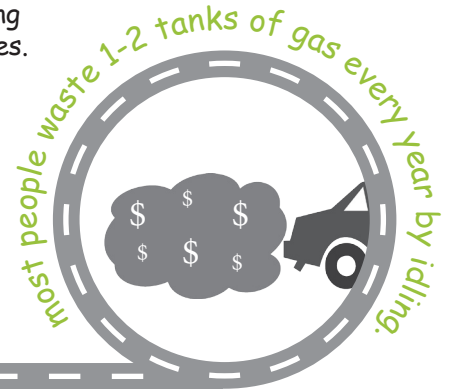

Asthma is the most common chronic illness among children and the largest cause of school absences.

Excessive exposure to air pollution can damage children's developing lungs.

Asthma is the 3rd leading cause of hospitalization among children under 15.

Depending on the size of your gas tank you could be wasting between \$39 - \$114 annually.

## DID YOU KNOW?

Idling vehicles increase air pollution in school zones. Because young lungs work twice as hard, they are more vulnerable to the harsh effects of idling.

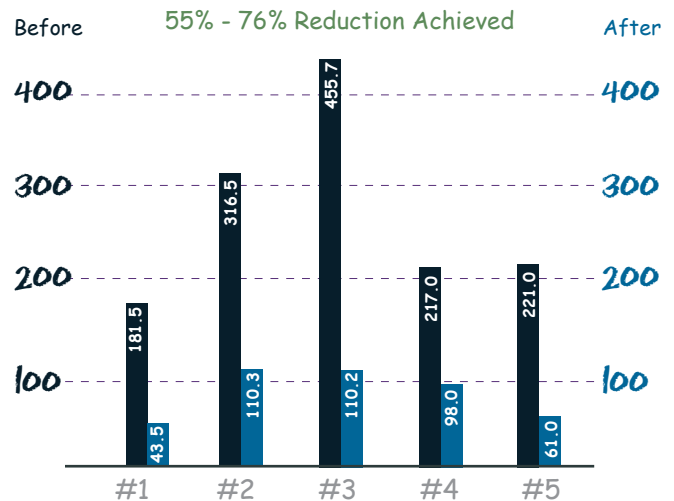

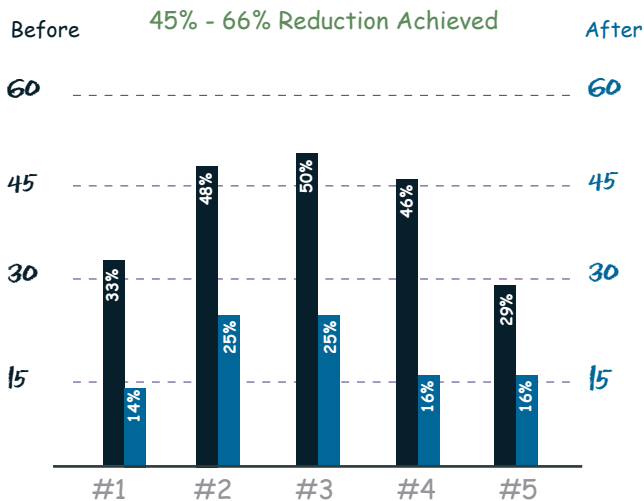

### The Problem

### The Solution

**Clean Air at Schools: Engines Off!** is a program designed to reduce air pollution exposure at schools in Colorado. We work with schools, students, and parents to reduce vehicle idling time during pick-up routines.

#### PERCENTAGE OF VEHICLES IDLING

#### TOTAL DAILY IDLE DURATION (MINUTES)

BEFORE AND AFTER RESULTS FROM ENGINES OFF! CAMPAIGN AT 5 COLORADO SCHOOLS BETWEEN 2008-2011
